Press Release (July 17th 2014)

Pynco achieves AS9100C certification

Pynco Inc., manufacturer of optical filters and custom machined glass and plastic products, is pleased to announce that it has recently obtained AS9100C registration from NQA America.

The AS9100C quality management system (QMS) standard is a supplier requirement for many Aerospace manufactures around the World. AS9100 certification provides companies with a comprehensive quality management system focused on areas directly impacting aerospace product safety and reliability.

By incorporating the AS9100 standard into Pynco's ISO-9001 registered QMS, Pynco continues to exemplify a commitment for product quality as an aerospace supplier by improving internal operational efficiency, producing shorter lead times, lowering production costs and improving product reliability. From our perspective, Pynco's commitment to product quality and customer service is simply a part of our organizational process of continual improvement.

Organizations with a well designed and implemented quality management system, based on the ISO-9001 and/or AS9100C standards, will generate a mutually beneficial atmosphere with employees that have obtained improved quality awareness.

All Pynco products are inspected and shipped with a certificate of conformance. Our customers take comfort in knowing that upon receipt, all products are ready for installation and all characteristics adhere to the required standards and specifications.
